How You Can Change Everything uses AI

This video is made with AI tools. The argument is mine, Johnny Dunn's, and it starts from my own notes. AI tools help research the public record, draft the script from my notes, make the recreations and sketches, and assemble the edit. I rewrite the script, record the narration myself and decide what is published.

The tools are Claude, Anthropic's model, for research, drafting and assembly, and OpenAI's image model, through Codex, for design frames. Codex and Google's Gemini check our research and plans as second reviewers. Any other AI tool in the finished video is added to this statement before it is published.

What Claude did and didn't do. Claude's work is the research on the public record, the script drafts from my notes, the edit, and the recreations and sketches, each labelled on screen. It does not alter any contributor's words, and it does not narrate: The narration is mine.

On screen, every recreation and sketch carries a label, such as DRAMATIZATION or RECOLLECTION, and no recreation is photoreal. Facts about real people come from court records and named reporting, cited in the video. Where YouTube's rules call for it, the upload carries YouTube's "AI use" disclosure.

If you take part, your recorded interview or written answers are edited for length and are not altered with AI.

John Carreyrou, whose book Bad Blood this video draws on, and five other authors sued AI companies, Anthropic among them, in December 2025. We say so because this video uses Claude.

Write to johnny@manic.agency with any question.

Narrative Dose, a Manic Agency production. johnny@manic.agency. Issued Sat 31 Oct 2026 with an interview or statement request for You Can Change Everything, releasing in early November 2026 on YouTube.
